Research Interests

Machine Reading, Imitation Learning, Graphical Models, Joint inference,
Machine Translation, Morphologically Rich Languages, Language Acquisition

Education

2008–2014 **PhD in Computer Science**, *University of Massachusetts Amherst*.

Advisor: David A. Smith

Certificate in Cognitive Science

2011–2014 **PhD in Computer Science**, *Macquarie University*.

Advisor: Mark Johnson

2008 **MSc, Artificial Intelligence**, *University of Edinburgh*.

Thesis: Improving Morphology Induction with Phonological Rules

Advisor: Sharon Goldwater

2007 **MS, Computational Linguistics**, *State University of New York at Buffalo*.

Thesis: The Effect of Frequencies and Unseen Events on Parser Portability

Advisor: Doug Roland

2006 **MA, Human Computer Interaction**, *State University of New York at Oswego*.

Thesis: Neural Networks for Automated Design Evaluation

Advisor: Craig Graci

2001–2005 **BS, Computer Science**, *State University of New York at Oswego*.

2001–2005 **BA, Linguistics**, *State University of New York at Oswego*.

Specialization: Artificial Intelligence, with Honors

Thesis: Baroque Music Generation using Genetic Algorithms with Theory-based Crossover

Minor: Cognitive Science

Summer Schools

2007 Linguistic Society of America Summer Institute 2007

Stanford University, Palo Alto, CA

Doctoral Thesis

Title *Learning with Joint Inference and Latent Linguistic Structure in Graphical Models*

Supervisors David A. Smith and Mark Johnson

Committee 1	Ben Marlin, Andrew McCallum, Joe Pater, and Kristina Toutanova
Committee 2	Tiberio Caetano, Ben Marlin, Luke Zettlemoyer
Description	Developed a modeling framework for constructing joint factor graph models of NLP problems, and described how latent combinatorially-constrained syntactic representations can be marginalized over during training to produce task-specific syntactic distributions without the need for treebanks.

Research Experience

2016–current	Research Associate Supervisor: Anna Korhonen University of Cambridge, Cambridge, England
2016	Senior Research Associate
2014–2016	Research Associate Supervisor: Sebastian Riedel University College London, London, England Developed techniques for event extraction with distance supervision, matrix factorization, and pointer networks. The resulting system improved upon the state-of-the-art on an established dataset by over 35% while requiring less linguistic annotation and pre-processing. Made connections between α -bound theory and regularisation for cost-sensitive imitation learning, which led to improvements in both AMR parsing and coreference. Also explored multilingual word representations, task-directed parsing, and exam question answering.
2012	Visiting Researcher Nara Institute of Science and Technology (NAIST), Nara, Japan Advisor: Yuji Matsumoto Explored techniques of incorporating syntactic information into sequence models for part-of-speech tagging in inflectional languages. Developed novel coarse-to-fine approach based on relaxations to marginal inference.
2010	Research Intern Microsoft Research, Redmond, WA Advisor: Kristina Toutanova Research in morpheme-based alignment models for machine translation. Resulted in a model for joint morpheme segmentation and alignment based on the HMM alignment model which improved alignment quality and outperformed all previous results on monolingual morphological segmentation for Arabic.
2008–2011	Research Assistant Computer Science Department, University of Massachusetts Amherst Advisors: Andrew McCallum and David A. Smith Research in unsupervised language learning, topic-modeling, parsing, named entity recognition, graphical models, and joint inference.
2008	Google Summer of Code 2008 Project: Dependency Parsing in the Natural Language Toolkit

Advisors: Sebastian Riedel and Jason Baldridge

Implemented a suite of four dependency parsers, relevant interfaces, and readers for commonly-used corpora.

2005-2006 **Research Assistant**

Psychology Department, State University of New York at Oswego

Advisors: Lin Qiu and Songmei Han

Research on cross-cultural HCI and adaptive feedback systems. Developed web applications for testing interface usability and, in a separate project, augmented a program to provide adaptive natural language critiques for Java code. Conducted a set of experiments using undergraduate student participants for both projects.

Teaching Experience

Fall 2009 Grader, Computer Science Department, University of Massachusetts Amherst
Class: CMPSCI 585: Introduction to Natural Language Processing
Instructor: David A. Smith

Advising

Masters Students

Chris Loy, University College London, 20165

Thesis: Deep Hierarchical Architectures for Polyphonic Music Transcription

James Goodman, Co-advised with Andreas Vlachos, University College London, 2015

Thesis: Semantic Parsing from English to AMR using Imitation Learning

Undergraduate Committee

Elias Zeidan, Marlboro College, 2013

Tutorials

Matrix and Tensor Factorization Methods for Natural Language Processing
Presented at ACL 2015

Invited Talks

- [1] *Distantly Supervised Event Extraction with Pointer Networks*
Komachi-ken, Tokyo Metropolitan University, June 9th, 2016
- [2] *Computers that Read: Uncovering the Structure of Language with Deep Learning*
Presented with Pontus Stenetorp
Artificial Intelligent Association, Osaka University, June 6th, 2016
- [3] *Distantly Supervised Event Extraction with Pointer Networks*
Matsumoto-ken, NAIST, June 3rd, 2016
- [4] *Artificial Intelligence: A Rationalist Perspective on the Past and Future of AI*
PechaKucha, presented with Sebastian Riedel
Embassy of Japan, London, March 23rd, 2016

- [5] *Deep Sequence Models, Multimodality & Conversational Agents*
Miyake-ken, Osaka University, Nov 5th, 2015
- [6] *Learning Latent Syntactic Representations with Joint Models*
Xerox Research Center, Grenoble, April 16th, 2015
- [7] *Learning Latent Syntactic Representations with Joint Models*
Cambridge University, March 13th, 2015
